

## Quicker and Easier Radio

### Short Data Applications

SDAs are user friendly interfaces for Sepura radios. They can be graphical "announcements", navigation menus or "buttons" with which you can perform actions. They make the radio easy and quick to use as an everyday tool, and they can be designed to fit exactly the application you need them to. Zonith is one of a few companies who offer SDAs.

### Makes Radio Simple

If you want your operation to run as smooth and easy as possible - Sepura SDA's are indispensable. Graphical interfaces are ideal for fast response to critical alarms, gate operation, pop-ups with vital information and much more.

The speed of handling messages, alarms and responses is considerably higher on a user-friendly interface. The ability to organize information on the radio makes the SDA a powerful addition to the radio as a work tool.

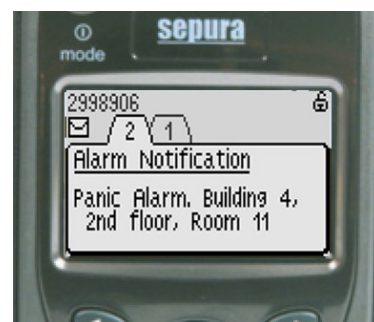

**Status Announcements** Examples of important announcements via SDA. ZONITH Lone Worker Protection, can automatically turn itself on and off, depending on where you are located. These SDA's informs the lone worker if his status is "lone worker" or "general".

### Efficient Alarm Handling

ZONITH Has developed SDAs for getting an overview of all the alarms you have responsibility for, and you can always have a look at the alarms information and get the full alarm detail. This kind of SDA gives you faster access to information, which leads to faster problem resolution.

### Clear Information

ZONITH uses SDAs for alarm handling. In this case it is a panic alarm, where the information is quick to read and understand. Every second counts in a panic alarm situation.

### Organized & User Friendly

Menus are well suited for organizing tasks and actions on the radio. In this example you can remotely control gates - and the SDA gives you an overview of which gates can be controlled. This type of menu is also very good for organizing alarms.
